of the fingers and thumbs. Fingerprints afford an infallible means of personal identification, because the ridge arrangement on every finger of every human being is unique and does not alter with growth or age. Fingerprints serve to reveal an individual's true identity despite personal denial, assumed names, or changes in personal appearance resulting from age, disease, plastic surgery, or accident.

Medicine. The papillary layer is the first layer beneath the epidermis, or the outermost layer, and connects to the epidermis via papillae.

Which Dermis Layer Is Responsible for Fingerprints?

We would like to show you a description here but the site won't allow us.

Google Scholar

Fingerprints are made of an arrangement of ridges, called friction ridges. Each ridge contains pores, which are attached to sweat glands under the skin. You leave fingerprints on glasses, tables and just about anything else you touch because of this sweat. All of the ridges of fingerprints form patterns called loops, whorls or arches:
