Fractures: Types, causes, symptoms, and treatment

There are many types of shoulder injuries: Fractures are broken bones. Fractures commonly involve the clavicle (collar bone), proximal humerus (top of the upper arm bone), and scapula (shoulder blade). Dislocations occur when the bones on opposite sides of a joint do not line up. Dislocations can involve any of three different joints.

Shoulder Trauma (Fractures and Dislocations) - OrthoInfo ...

Fractures with greater than 50% articular surface injury have little collateral ligament stability and have lost the cup-shaped articular surface that provides intrinsic stability to the joint. Nondisplaced fractures and stable displaced fracture patterns are treated with a protective orthosis of the PIP joint while allowing for active MCP and DIP motion.
